HAVING THE RIGHT TOOLS ON SITE

November 2010

Ensuring you have the right tools on site is a very important aspect of properly maintaining your car wash equipment. In order to carry out some simple electrical testing we recommend you have on site a good quality Multimeter and Insulated Screw Drivers. Now might be a good time for you to consider keeping a toolbox on site and assess the need for other basic tools; spanners, hammer, pliers, vice grips, etc...

Check out our recommended Toolbox Contents list [here](#)
