SELF SERVE CAR WASH BAY INSPECTION

August 2009

It is common for Car Wash Managers and Attendants to wash their own vehicle while they are on site. This is a great way for you to test your equipment and ensure everything is working at its optimum. This could include the inspection of accurate product delivery; length of hog hair brush bristles; leaking hoses, swivels or fittings; and general bay presentation and cleanliness.

Instead of using your 'favourite' or 'regular' bay to do this it is recommended you use all bays. This will allow you to experience exactly what your customers are experiencing in each bay and attend to any maintenance issues promptly.
