

# Improved LaserWash Spray Arch

PDQ Manufacturing is offering a sale on our improved high-performance spray arch

[www.pdqinc.com](http://www.pdqinc.com)

## The new arch features the following improvements:

- 1.) Longer horizontal manifold with more nozzles providing improved coverage
- 2.) Additional top nozzles on vertical manifold improve cleaning, including under visors and spoilers
- 3.) New arch cover upgrades appearance
- 5.) Directly retrofits all LaserWash 360 or LaserWash 360 Plus machines, with no equipment modifications  
*(not available for LaserWash 4000).*

# Improved LaserWash Spray Arch

The new PDQ LaserWash spray arch is designed to improve cleaning on modern vehicles. The top manifold has been lengthened (by over 5 inches) in response to today's larger trucks. Many hatchbacks, crossovers, and minivans now come equipped with roof spoilers that block off part of the rear window. The side manifold has nozzles positioned to clean underneath these spoilers of various heights. This new arch is retrofittable on LaserWash 360, LaserWash M5 and LaserWash 360 Plus.

In addition to the performance benefits, the upgraded arch comes with a new, modern appearance package. The design aims to give the arch a greater presence and freshen the look of any machine, while maintaining the open-bay concept for the end user during parking. The added bulk of the cover is intended to add cushion, protecting the arch and vehicle in the event of a strike. The covers were also designed for increased serviceability over the current arch; it is now possible to install the arch or change a shear pin without removing any covers.

See MPPB -130- New Spray Arch for more technical details. Especially if ordering for LaserWash M5.

PDQ Part Number: PDQ11350436
